

Improving Patient Safety in Interventional Radiology: A Multi-centred Trainee-led Approach to Increasing Compliance of the Radiology WHO Checklist

H Madani, A S Nelson, P Logan, N Day, A Camenzuli

Objectives

- WHO Radiology check list
- Compliance rates
- Audit cycle – improving practice
- Practice implications & the next steps

Introduction- Errors are common

- More than 230 million operations every year
- 10% of hospitalized patients experience a patient safety incident
- 50% of these are preventable
- 971 deaths in the UK (Jan 2005 - Sept 2008)

A checklist is...

- A formal list used to identify, schedule, compare or verify a group of elements
- Used as visual or oral aid that enables the user to overcome limitations of short-term human memory

A simple checklist

- Simple checklists have significantly reduced morbidity and mortality in surgery
- National Patient Safety Agency (NPSA) between 2005 and 2008
- The WHO Radiology checklist introduced throughout England and Wales 2010

Evidence of impact in surgery

- **Before**
 - Death rate = 1.5%
 - Complications = 11.0%
- **Afterward**
 - Death rate = 0.8%
 - (P = 0.003)
 - Complication = 7.0% (P<0.001)

Surgical Safety Checklist		
World Health Organization		Patient Safety <small>A Global Alliance for Safer Health Care</small>
Before induction of anaesthesia <small>(with at least nurse and anaesthetist)</small>	Before skin incision <small>(with nurse, anaesthetist and surgeon)</small>	Before patient leaves operating room <small>(with nurse, anaesthetist and surgeon)</small>
<p>Has the patient confirmed his/her identity, site, procedure, and consent?</p> <input type="checkbox"/> Yes	<p><input type="checkbox"/> Confirm all team members have introduced themselves by name and role.</p> <p><input type="checkbox"/> Confirm the patient's name, procedure, and where the incision will be made.</p> <p>Has antibiotic prophylaxis been given within the last 60 minutes?</p> <input type="checkbox"/> Yes <input type="checkbox"/> Not applicable	<p>Nurse Verbally Confirms:</p> <input type="checkbox"/> The name of the procedure <input type="checkbox"/> Completion of instrument, sponge and needle count <input type="checkbox"/> Specimen labelling (read specimen labels aloud, including patient name) <input type="checkbox"/> Whether there are any equipment problems to be addressed
<p>Is the site marked?</p> <input type="checkbox"/> Yes <input type="checkbox"/> Not applicable	<p>Anticipated Critical Events</p> <p>To Surgeon:</p> <input type="checkbox"/> What are the critical or non-routine steps? <input type="checkbox"/> How long will the case take? <input type="checkbox"/> What is the anticipated blood loss?	<p>To Surgeon, Anaesthetist and Nurse:</p> <input type="checkbox"/> What are the key concerns for recovery and management of this patient?
<p>Is the anaesthesia machine and medication check complete?</p> <input type="checkbox"/> Yes	<p>To Anaesthetist:</p> <input type="checkbox"/> Are there any patient-specific concerns?	
<p>Is the pulse oximeter on the patient and functioning?</p> <input type="checkbox"/> Yes	<p>To Nursing Team:</p> <input type="checkbox"/> Has sterility (including indicator results) been confirmed? <input type="checkbox"/> Are there equipment issues or any concerns?	
<p>Does the patient have a:</p> <p>Known allergy?</p> <input type="checkbox"/> No <input type="checkbox"/> Yes	<p>Is essential imaging displayed?</p> <input type="checkbox"/> Yes <input type="checkbox"/> Not applicable	
<p>Difficult airway or aspiration risk?</p> <input type="checkbox"/> No <input type="checkbox"/> Yes, and equipment/assistance available		
<p>Risk of >500ml blood loss (2ml/kg in children)?</p> <input type="checkbox"/> No <input type="checkbox"/> Yes, and two IV/central access and flush prepared		
<p><small>This checklist is not intended to be comprehensive. Additions and modifications to fit local practice are encouraged.</small></p>		
<small>Revised 1 / 2008</small>		<small>© WHO, 2008</small>

The reality...

- Jan 2009
 - NPSA, CMO, DH, Lord Darzi Guidelines
 - "All health organisations must do check list by Feb 2010"
- March 2009
 - Royal College Radiologists (RCR) Guidelines
 - "All diagnostic and Interventional Radiology procedures requiring local and general anaesthetics"

Royal College Radiologists (RCR) Guidelines

- Involve all staff in radiology department
- Find out existing local policies and develop protocol that complies
- Have an open discussion about merits & obstacles of using the checklist
- Take a step by step approach to creating an effective process
- Developed by those that use them and flexible enough to adapt to different procedure

Checklist Content

- | | |
|--|---|
| <ul style="list-style-type: none"> • Patient details • Request form • Consent • Allergies • Bloods reviewed <ul style="list-style-type: none"> • Hb, INR, Plt, eGFR/Cr • Blood loss <ul style="list-style-type: none"> • Cross matched • Site marked • Prescribed <ul style="list-style-type: none"> • Sedation, analgesia, antiemetic | <ul style="list-style-type: none"> • BP/Pulse monitoring • Essential imaging reviewed • Post procedure - ward informed of after care • <u>Check list scanned into PACS</u> |

**WHO Surgical Safety Checklist:
for Radiological Interventions ONLY**
(adapted from the WHO Surgical Safety Checklist)

NHS
National Patient Safety Agency
National Reporting and Learning Service

SIGN IN (to be read out loud)

Before giving anaesthetic (local or general)

Have all team members introduced themselves by name and role?
 Yes

All team members verbally confirm:

- What is the patient's name?
- What procedure, site and position are planned?

If general anaesthetic given the two questions above should be read out at the beginning of TIME OUT

Has the patient confirmed to her/his identity, site, procedure and consent?
 Yes

Has essential imaging been reviewed?
 Yes No

Are all IMR/CR equipment met?
 Yes

Is the procedural site marked?
 Yes No

Is the anaesthetic machine/monitoring equipment and medication check complete?
 Yes No

Does the patient have a known allergy?
 No Yes

Has the patient had a blood test (Tb/Tg in children)?
 No Yes (and adequate if accessible planned)

Have risk factors for bleeding and renal failure been checked?
 Yes No

Has antibiotic prophylaxis been given?
 Yes No

Has VTE prophylaxis been undertaken?
 Yes No

Is the required equipment available and in date?
 Yes

Are there any critical or unexpected steps you want the team to know about?
 Yes No

ONLY IF GENERAL ANAESTHETIC IS GIVEN

TIME OUT (to be read out loud)

Before start of radiological intervention (for example needle to skin)

Anticipated critical events

Anaesthetic (if present):

- Is the anaesthetic machine check complete?
- Does the patient have a difficult airway/aspiration risk?
 Yes No
- Are there any patient-specific concerns?
- What is the patient's ASA grade?
- What monitoring equipment and other specific levels of support are required, for example blood?

Registered practitioners/CR:

- Are there any equipment issues or concerns?
- Has the surgical site infection (SSI) bundle been undertaken?
 Yes No
- Antibiotic prophylaxis
- Patient warming
- Hair removal
- Specimens retained

Registered Practitioner/CR verbally confirms with the team:

- Has the name and side of the procedure been recorded?
- Have all pieces of invasive equipment used been accounted for?
- Have any implanted devices been recorded?
- Have the specimens been labelled (including with patient's name)?
- Have any equipment problems been identified that need to be addressed?

Radiologist, Anaesthetist and Registered Practitioner:

- Have the instructions for post procedural care for this patient been agreed?

Remember to scan onto CRIS or record checklist has been undertaken

INTENT DETAILS

Last name: _____
First name: _____
Date of birth: _____
MRB number: _____
Date of procedure: _____

* If the MRB number is not recording correctly, a temporary number should be used with the

**The checklist is for
Radiology Interventions ONLY**
This modified checklist must not be used for other surgical procedures.

NPSA 1208 March 2008

Aim

- **The RCR recommends implementation of WHO checklist in all interventional procedures involving any form of anesthesia.**
- Standard : 100 % of all Interventional Procedures

Method

- Retrospective analysis
- Radiology information systems of two departments
 - Aintree University Hospital NHS Trust (hospital A)
 - Wirral University Teaching Hospital NHS Trust (hospital B)
- CT and Fluoroscopy guided interventional procedures
- One month period in 2010
- Trainee lead educational campaign
- Repeated study in 2011

WHO Proforma

- Checklist done
- Any significant findings
- Procedure cancelled
- Procedure modified
- Patient re-booked

WHO Proforma Audit	
• Cris no	
• Date of procedure	
• Name of procedure	
• WHO check done	Yes No
• If WHO check done	
	Any significant findings noted on WHO check
	Yes No
	If Yes what was noted
	If Yes any implication to the procedure planned
	Yes No
	• If yes to above tick one of the below or fill the information.
	a) Procedure cancelled all together
	b) Procedure modified
	c) Patient rebooked
	d) Other
• Follow-up of any equipment problems	Yes No

Audit weakness

- Missed data - Checklist performed but not recorded e.g. during out of normal hours on call
- US guided procedures not included

Trainee led intervention

- Nominated Trainee for each Hospital
- A systematic review of the checklist process
- Active involvement of departments
 - Interventional Consultants
 - Key radiographers
- Informative Lectures and posters
- Regular Updates

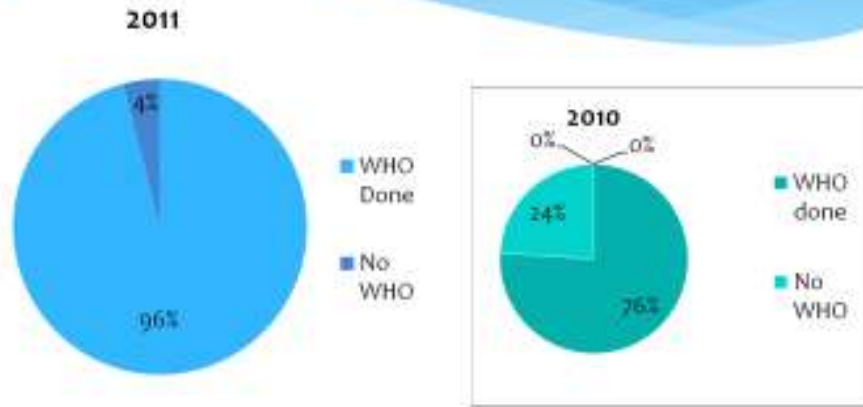

Results

- One month (Nov – Dec) in 2010 and 2011 (Hospital B)
- Procedures 2010 = 123
- Procedures 2011 = 119
 - Vascular e.g. Angioplasty, embolization
 - Abdominal e.g. Stents, Tubograms

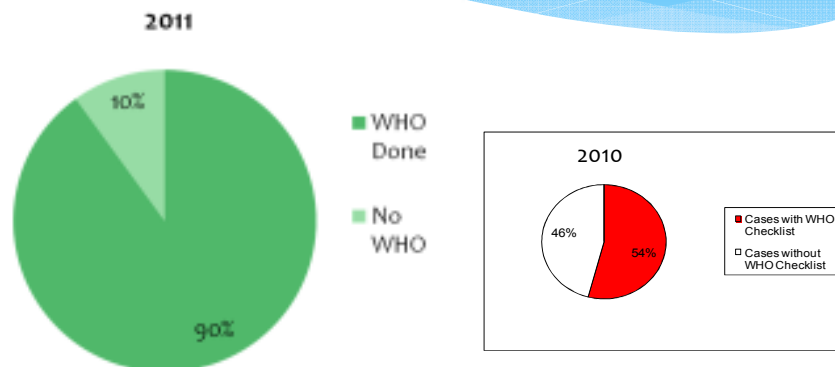

Results – Procedure mix

Compliance - Aintree (Hospital A)

Compliance - Arrow Park (Hospital B)

Summary

Chart Summarizing the percentage compliance of the Radiology WHO checklist in each hospital, pre (2010) and post (2011) trainee-led intervention.

Problems identified

- Findings
 - 42x Allergies e.g. medication and latex
 - High INR, no Bloods or Cross matching
- 2 x Abandoned procedure
- Equipment availability or failures
- Incomplete checklists
- No electronic Record of checklist performed

Conclusion

- Lower than expected Radiology WHO Checklist compliance rates in multiple institutes
- Coordinated trainee-led educational program improved compliance
- Significant improvement in Patient safety standards

Recommendations

- **Verbal confirmation of checklist**
 - Everyone in the room, including the patient, are encouraged to respond (e.g. confirmation of allergy status, antibiotic or VTE prophylaxis)
- **Completed Checklist scanned into patient electronic radiology record**

Recommendations

- WHO Check list - All invasive procedures
- Formal listed of exceptions – department policy
- Introduce a nominated “check list Officer”
- Active involvement of key stakeholders

Exclusions?

- Tubograms/Linograms
- PICC lines
- HSG

What's next locally

- Reminder and promotional posters in Interventional Radiology, CT and Ultrasound departments
- Introduce electronic recording of WHO checklist in all departments
- Re-audit in 12 months

The next steps:

- More Hospitals
 - Large Trauma centres
 - Smaller district departments
- Collaboration with Quality Improvement body
- National and International Presentations to raise awareness
- RCR national Audit
