

Great News for Radiologists and Researchers

 Your institution has a Read & Publish agreement with the Radiological Society of North America (RSNA), which means that your **published** original research, technical developments and case series in *Radiology*, *Radiology: Artificial Intelligence*, *Radiology: Cardiothoracic Imaging* and *Radiology: Imaging Cancer* as well as full-length manuscripts in *RadioGraphics* will be **Open Access (OA)** without incurring article processing charges. OA articles receive 89% more downloads and 23% more unique visitors than subscription-based articles, plus they achieve an averaged 50% more citations!*

By publishing your OA article through the agreement your institution has with RSNA, your research is:

- Immediately available
- Open to increased citations
- More globally visible and accessible
- Available for wider collaboration
- Compliant with OA mandates for funding
- Accessible for interdisciplinary conversation and research

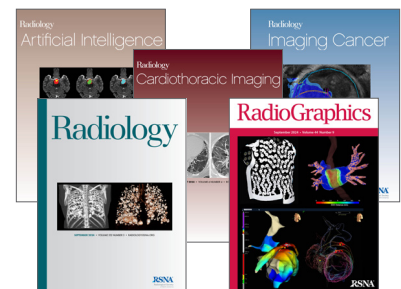

What does the Read & Publish agreement with RSNA mean for your institution?

Immediate, unlimited and APC-free publishing of Open Access research articles by corresponding authors and no barriers to sharing and reuse.

- Greater visibility of research, leading to wider collaboration with peer institutions
- Wider availability of research, which leads to recognition of your institution as a leader

For more information, contact your institution's librarian.

Take a look at RSNA's peer-reviewed journals
